Toolbars There are three main toolbars, each with a left pane, one for editing commands and one for tools and preferences. Drawing The main drawing pane is the primary user interface, with a start drawing, drawing panel, status bar, measurement and object properties. Drawing tools There are six main

drawing tools, each with a left pane: Viewport tool, which can be used to select entities in the drawing. Polyline tool, which can be used to draw and edit smooth curves. Text tool, which can be used to add, modify or remove text. Tools tool, which can be used to add, modify or remove custom tools. Measuring tool, which can be used to measure,

create or modify linetypes. Special drawing tools, such as straight edge and profile, which can be used to add splines and other geometric entities. The drawing tools are unique to AutoCAD Cracked Version Architecture or AutoCAD Activation Code Civil 3D, but they are available in AutoCAD LT and AutoCAD Mechanical. AutoCAD

Modelica is a tool that uses the drawing panels of AutoCAD Architecture and AutoCAD Civil 3D, and integrates modeling functionality. Typing commands Typing commands may be performed by a keyboard, by using the built-in text entry dialog box or by using the Clipboard. Command entry is supported directly into

model space or off-screen through the Clipboard, and into drawing space through the Drawing toolbar, the Layout toolbar or the Annotation toolbar. Commands can be typed using the Shift, Ctrl, or Alt keys. The history can be saved for future use, and commands can be pasted. Copying a command from the history into the Clipboard can

also be done. Commands may be issued in a combination of text and a graphic, or with the command input dialog box. Typing commands into the Clipboard and pasting commands into the Drawing toolbar or Model space is also available through the Clipboard Manager. Commands can be copied from the Clipboard, and the Clipboard can

be closed. Graphical user interface AutoCAD's GUI may be seen as a "bitmap over window" graphical user interface (GUI). It is very similar to Microsoft Windows and is scalable and dynamic. The UI is based on bitmap graphics. A 2D vector line is represented by a series of discrete pixel points; when the line is selected, these points can
