Astrophotography Calculator calculates several parameters that will help you optimize the use of your telescope for astrophotography. Get the maximum amount of light gathering power and the best field of view by entering the aperture and the... Astrophotography Calculator is a handy application designed to help the photographers that use telescopes in order to capture images. The program allows you to calculate the effective focal length and the field of vision by entering a set of parameters. You can use the program by selecting the available presets or by entering the parameters manually. Astrophotography Calculator Description: Astrophotography Calculator calculates several parameters that will help you optimize the use of your telescope for astrophotography. Get the maximum amount of light gathering power and the best field of view by entering the aperture and the... The Small Planet Telescope is a small astronomical observatory telescope with a 12.5-inch diameter aperture (front objective lens) and a minimum focal length of 28 inches. So the resolution of the Small Planet Telescope is impressive and ideal for viewing the planets, stars and galaxies of the night sky. The telescope has 12 clear aperture, optical corrector lenses along the optical path, providing strong primary and secondary focus. These lenses provide accurate results at up to 80x magnification. The Small Planet Telescope has an... The Small Planet Telescope is a small astronomical observatory telescope with a 12.5-inch diameter aperture (front objective lens) and a minimum focal length of 28 inches. So the resolution of the Small Planet Telescope is impressive and ideal for viewing the planets, stars and galaxies of the night sky. The telescope has 12 clear aperture, optical corrector lenses along the optical path, providing strong primary and secondary focus. These lenses provide accurate results at up to 80x magnification. The Small Planet Telescope has an... Just like the Big Planet Telescope, the Weather Station continues a long tradition of offering unique observing equipment with a different focus, but with similar high quality components. It is a mobile meteorological and optical observatory that offers a new dimension in weather stations. The Weather Station is a mobile and mobile-mountable meteorological and optical observatory that offers a wide range of equipment that will not only help you take the best pictures, but also keep you informed about the weather and surroundings. The Star Visualizer is an application designed to help users measure the sizes of celestial objects using our telescopes. It uses the so-called airmass numbers, which are calculated depending on the characteristics of

#### What's New In Astrophotography Calculator?

Astrophotography Calculator is a handy application designed to help the astronomers that use telescopes in order to capture images. The program allows you to calculate the effective focal length and the field of vision by entering a set of parameters. You can use the program by selecting the available presets or by entering the parameters manually. Astrophotography Calculator Features: - Set of presets - Adjusting of parameters - Save and Load settings - Fixed and floating focus - Shortcuts - Display of results - Single and multiple modes Astrophotography Calculator 1.3.0 Beta 2 You can also free download many software at Software Informer. Weather Log Pro 2.4.0.6 Weather Log Pro can monitor more than 50 kinds of measurement data, you can view most of the data online and visualize the data on your Windows desktop. This software uses very small free memory and doesn't have too many forms. Weather Log Pro provide the cloud service to keep all the data online and make it available anytime and anywhere.
