Version history History of AutoCAD versions

AutoCAD was first released in 1982. It was written on the HP-3000 minicomputer. The first design used a block-based drawing system. In the early days of AutoCAD, there were no standard practices in the industry for drawing standards. CAD files were "generic", which allowed multiple companies to use the same files. In 1983, the National Design Information Center (NDIC), a tool provider, released the first draft standards. The NDIC document set was developed for the HP-3000. Draft standards included 16- and 24-bit gray-scale at a resolution of 96 × 96 pixels and 300 dpi. Draft standards listed color in four levels, 256 colors (4 bits of color). The NDIC draft standards were only for one-piece 2D drawings, not 3D drawings. In 1984, the National Center for the Replacement of Experimentation Animals (NCREA) in the United States funded the development of drawing standards for AutoCAD

and other Autodesk products. In 1985, the first AutoCAD standards were released. Standards covered multi-sheet, block, color, shade, and trim. Color standards allowed black, gray, cyan, magenta, yellow, red, green, and blue. Shade standards allowed solid, transparent, and dashed. AutoCAD was the first AutoCAD product to support shape color, trim, and shading. The NDIC standard became a part of the AutoCAD standards. Related software AutoCAD is a package of utilities to create, edit, and manage technical drawings. It is primarily used by mechanical engineers, drafters, and construction managers. AutoCAD is not the only software package available for technical drawing. At a basic level, technical drawings can be created with a graphical programming language, language translator, or with a diagramming tool, such as Visio. In 1981, CadSoft was one of the first software developers to offer a graphical programming language. CadSoft's Language System for Design, originally called LabSystem, was not sold in hardware form. The language allowed users to add or subtract features from drawings created with AutoCAD, and it had 50 predefined

functions. AutoCAD was the first product to support a graphical programming language. In 1982, Graphic Design Associates introduced LISP as a subset of the BASIC programming language. It was similar to CADLISP in that it
